

The Modularization **Evaluation Workshop** - let's clarify what modularization can mean for your production planning

In this workshop:

- ✓ we clarify all communication terms on a common language level
- ✓ we work out an overview of your challenges in close cooperation with the modularization expert Dr Wilhelm Otten
- ✓ we determine the savings potential that can be achieved for you by modularization in your engineering processes as well as in operations
- ✓ we draw up the roadmap for a pilot project following the workshop.

Subsequently, we can realize the identified savings potential from the **evaluation workshop** together with you in a **pilot project**. This will enable you to independently implement modularization in the entire process chain in your company.

This is what you can expect from your pilot project:

- + Up to 50% reduction in Time-To-Market
- + Increase in the flexibility of your plants by up to 80%
- + Up to 70% reduction in your engineering costs
- + Configuration of plants instead of individual engineering
- + Continuous technology from the laboratory via the pilot plant to produce
- + Comparison documents of suppliers and guidelines
